KEY WORDS (Continue on reverse side if necessary and identify by block number) Military history, engagement data bases, personnel strength data, casualty data, assessment of victory in engagements, engagement duration data, attacker and defender width of front data, defender posture data, strength and casualty data quality estimation, strength and attrition histories.		
20. ABSTRACT (Continue on reverse side if necessary and identify by block number) This final report contains enhanced data and corrections of omissions, inconsistencies, and ambiguities for a 1984 study performed by HERO for USACAA entitled "ANALYSIS OF FACTORS THAT HAVE INFLUENCED OUTCOMES OF BATTLES AND WARS: A DATA BASE OF BATTLES AND ENGAGEMENTS" (Contract No. MDA903-82C-0363). It has been performed in order to make the data base contained in the 1984 study applicable for use in U.S. Army studies and analyses, concept formulations, and wargaming. It contains enhanced and

Task 2: Clarification of the Total Engaged Personnel Strength

Data

→ The purpose of this task is to identify the type of personnel strength given for an engagement. Three categories of personnel strength are provided: Start Strength, Average Daily Strength, and Total Engaged Strength. → See p 119

1. Start Strength. The sum, at the start of an engagement, of all personnel subject to enemy fire. An "x" under column heading 1 on the following tables identifies the strength as start strength.

2. Average Daily Strength. The average daily number of personnel subject to enemy fire. An "x" under column heading 2 on the following tables identifies the strength as average daily strength. The derivations of the average daily strength computations are provided in footnotes appended to the Task 2 tables.

3. Total Engaged Strength. The total number of personnel subject to enemy fire during the entire duration of the engagement. An "x" under column heading 3 on the following tables identifies the strength as total engaged strength.

New strength and casualty data, generated as a result of the work done on General Problem Reports 2 and 3, and improved data found in research for other parts of this study are also presented in the Task 2 tables. Where appropriate, users of the data base should substitute the revised strength or casualty data presented here for that in Table 3 of the original data base. An asterisk after an engagement number indicates that revised data is given for the engagement, either "enhanced" data,

such as reinforcements, which does not change the original data, or entirely new data.

For two engagements, Arcis-sur-Aube, #142, and Monastir, #251, the duration in days has been changed. The revised values are presented in the footnotes appended to the Task 2 tables. These two engagements are the only ones for which duration in days has been changed. Users of the data base should make the appropriate changes in Table 1 in the original data base and in the percent per day casualty rates and KPDA values for these two engagements and any others in which strength or casualty ^{or duration} data has been changed. Explanations of the column headings for the Task 2 tables are as follow:

Strength is the value reported for personnel strength in the original data base, or a revised value, if research performed for this study has resulted in a change in the original figure. The type of strength is indicated by an "x" under the appropriate column heading marked "1," "2," or "3," as described above.

Initial Strength is the sum, at the start of an engagement, of all personnel subject to enemy fire. This value is provided if data is available. For engagements in which the start strength is presented under Strength, it is the same value.

Reinforcements/Replacements (Reinf./Repl.) are the total number of personnel received as such during the course of an engagement. In pre-twentieth century engagements, this number frequently represents units which were not subject to enemy fire at the start of the engagement, but which reinforced their side

during the course of the battle. This value is provided if data is available.

Casualties are the total number of battle casualties sustained by a force during an engagement. For a more comprehensive definition of this term, see page 11 in Volume II of the original data base. The number presented here is the figure reported in the original data base, or a revised value if research performed for this study has resulted in a change in the original data.

Final Strength is the total strength of a force at the end of an engagement. This value is provided if data is available.

Sources for new data presented in these tables and derivations of average daily strength computations are given in the footnotes appended to the Task 2 tables.

TASK 2: STRENGTH CLARIFICATION

Nieuport, #1

	Strength	1	2	3	Initial Strength	Reinf./Repl.	Casualties	Final Strength
A:	11,500	x	-	-	11,500	0	4,000	7,500

Task 2 Footnotes

Wimpfen, #3

The defender's strength and casualties are from Bodart, p. 50.

Luetzen, #9

The defender's initial strength is from Sweden, Generalstabens, Vol. VI.

Edgehill, #20

Strength and casualty data is from Young and Adair, pp. 136, 142.

Preston, #26

The attacker's casualties in the Battle of Preston are nowhere specified, not even in the original sources. HERO estimates approximately 100 KIA based upon the brief discussion in Woolrych, p. 178, and adds to this figure 200 WIA, the normal ratio of WIA to KIA at this period being 2:1. Total attacker battle casualties certainly could not have been less than 300, and may have been as high as 600.

Killiecrankie, #40

Casualty data is from Kinross, p. 181, and Smurthwaite, p. 194.

Maxen, #78

All data is from Bodart, p. 237, except defender casualties, which are from Malleson, Ambushes, p. 293.

Torgau, #81

All data is from Duffy, p. 235.

Princeton, #86

The strength of the attacker's force initially engaged was approximately 1,250, composed of 350 men of Mercer's command (Boatner, American Revolution, p. 891) and 900 men of Cadwalader's militia (Dupuy and Dupuy, Compact History of the

Revolutionary War, p. 180). The initial strength of the defender was 800 men (ibid., p. 179).

Freeman's Farm, #87

The strength of the attacker's force which was initially engaged was 3,300 men, from the right and center columns. See Boatner, American Revolution, p. 971.

Monmouth Court House, #90

The strengths of the attacker's and defender's forces initially engaged were 2,000 and 5,000 men respectively. See Boatner, American Revolution, p. 721.

Fleurus, #101

The defender's strength is from Dupuy and Dupuy, Encyclopedia, p. 681.

Lodi, #102

The attacker's initial strength was approximately 6,100 men (3,600 infantry and 2,500 cavalry). See Chandler, Napoleon, pp. 78, 81.

Castiglione, #103

The attacker's initial strength is from Chandler, Dictionary, p. 83.

Wuerzburg, #105

The defender's casualties are from Bodart, p. 312.

Mount Tabor, #110

The defender's reinforcements are from Chandler, Dictionary, p. 431.

Marengo, #115

Two French divisions by themselves opposed the attacking Austrians at the beginning of the battle according to Chandler, Napoleon. The strength of the two divisions was nearly 9,000 men (ibid., p. 1102). This is the estimated initial strength of the

defender.

Hohenlinden, #116

Strength clarification for the defender is from Dodge, Napoleon, II:96.

Austerlitz, #117

The strength of the defender's reinforcements is from Atlas to Accompany Napoleon, map 42. The 8,000 men of Davout's corps are considered reinforcements.

Jena, #118

The attacker's and defender's initial strengths are from Chandler, Napoleon, pp. 479-480.

Auerstadt, #119

Two divisions (Orange's and Wartensleben's) are considered reinforcements for the attacker. Von Lettow-Vorbeck gives Wartensleben's strength as 7,800. Orange's division was organized similarly and is estimated to have had the same strength. Total attacker reinforcements are therefore estimated to be 15,600. Maude, p. 172, gives the strength of Morand's division as 6,200. This figure is considered the defender's reinforcement.

Eylau, #120

A map on p. 539 of Chandler, Napoleon gives the combined strength of Ney's and Davout's corps as 29,100. This is considered the attacker's reinforcement. Lestocq's command of 9,000 men is considered the defender's reinforcement.

Friedland, #121

The attacker's initial strength of 17,000 men (9,000 infantry and 8,000 cavalry under Lannes) is from Chandler, Napoleon, p. 573.

Eckmuehl, #124

The defender's initial strength was 36,000 men, according to Chandler, Napoleon, p. 689.

Aspern-Essling, #125

The defender's initial strength was 23,000 men, according to Chandler, Napoleon, p. 702.

Luetzen, #135

The defender's initial strength was 45,000 men under Ney, according to Esposito and Elting, map 129.

Bautzen, #136

The attacker's reinforcements were 84,000 men under Ney, according to Esposito and Elting, map 131a. The attacker's initial strength was 115,000.

Dresden, #137

Attacker and defender initial and total strengths are from Esposito and Elting, maps 135 and 136.

Leipzig, #138

The initial attacker strength was approximately 200,000 men (Esposito and Elting, map 141) rising to a total strength of 365,000 (Chandler, Napoleon, p. 1,120). The initial defender strength was 177,500 men, with 18,700 as reinforcement (ibid., p. 924).

Hanau, #139

The attacker's initial strength is from Esposito and Elting, map 144.

La Rothiere, #140

The attacker's initial strength was 78,000 men, 53,000 under Bluecher and 25,000 under Wrede (Chandler, Napoleon, p. 960).

Laon, #141

The attacker's reinforcements were 10,000 men under Marmont (Chandler, Napoleon, p. 989).

Arcis-sur-Aube, #142

Attacker and defender initial strengths are from Chandler, Napoleon, p. 1118. Note that this engagement's correct duration

should be two days (20-21 March 1814).

Ligny, #143

The attacker's reinforcements were approximately 18,000 men of the French Imperial Guard. See Dodge, Napoleon, IV:573.

Quatre Bras, #144

The defender's initial strength was approximately 8,000 men according to Chandler, Napoleon, p. 1048.

Waterloo, #145

The defender's initial strength is from Esposito and Elting, map 166 (68,000 men under Wellington).

Lundy's Lane, #148

The attacker's reinforcements are estimated to be approximately two-thirds of the total US force, i.e., two brigades or 1,300 men. See Esposito, West Point Atlas, I, map 11. The defender's initial strength was some 1,700 men according to Jacobs and Tucker, pp. 137-138.

Inkerman, #166

The defender's initial strength was 8,500 men according to Young and Calvert, p. 20.

Sadowa (Koeniggraetz), #169

The attacker's reinforcements consisted of 115,000 men of the Prussian Second Army. See Dupuy, Genius, p. 81.

First Bull Run (First Manassas), #171

The defender's reinforcements were 2,000 men under Kirby Smith, according to Esposito, West Point Atlas, I, map 22.

Belmont, #173

The defender's initial strength was 2,500 men. Total strength committed was 5,000. See Johnson and Buel, I:356. (Johnson and Buel is hereafter cited as B&L.)

Shiloh, #178

Defender reinforcements totalled 25,482 men from Buell's command and Lew Wallace's division. See Johnson and McLaughlin, p. 49.

Port Republic, #182

The attacker's start strength is from Henderson, p. 288. This was 1,200 men of Winder's brigade.

Seven Pines (Fair Oaks), #183

See B&L, II:219, for a breakdown of forces involved in this engagement. The attacker's start strength is for D.H. Hill's division, and the defender's start strength is for Couch's and Casey's troops.

Gaines's Mill, #185

The attacker's start strength is from Livermore, Numbers and Losses, p. 84. This is the strength of A.P. Hill's and Longstreet's troops. The defender's reinforcements are from Slocum's division (Henderson, p. 359).

Glendale-Frayser's Farm, #186

The defender's total engaged strength is from Livermore, Numbers and Losses, p. 84. The attacker's and defender's casualties are calculated for this engagement by adding the casualties incurred on 29 and 30 June, as presented in Boatner, Civil War, pp. 722, 915-916. The attacker's initial strength represents that of Magruder's troops, as presented in Freeman, I:549. The defender's initial strength is that of Sumner's corps and W.F. Smith's division as shown in War of the Rebellion, Vol. XI, Part III, p. 238, and estimated at 93% effectives, i.e., $0.93 \times 26,489$ (Livermore's formula in Numbers and Losses).

Malvern Hill, #187

Strength data for both sides is calculated by subtracting the losses of 29-30 June from the strengths given for 29-31 July in Livermore, Numbers and Losses, p. 85. Casualty data for both sides is from Boatner, Civil War, p. 507.

Second Bull Run (Second Manassas), #189

The attacker's initial strength is that of Sigel's troops, not including Reynold's division, and Heintzelman's troops, a total of 35,083 men according to Livermore, Numbers and Losses, p. 88.

Jackson's command of 20,000 men is taken as the defender's initial strength. See Boatner, Civil War, p. 104.

Antietam (Sharpsburg), #191

The defender's reinforcements represent A.P. Hill's division, 3,000 men according to Henderson, p. 538.

Corinth, #192

Strength and casualties and NAMA and NAMD for both sides are reversed in the original report. The attacker's strength and casualties should be 22,000 and 4,233, and the defender's figures are 21,147 and 2,520. The Confederates attacked, and Union forces were defending. C/S = Van Dorn = A, US = Rosecrans = D

Chancellorsville, #196

The attacker's total strength is from Dupuy and Dupuy, Encyclopedia, pp. 884-885. The attacker's reinforcements represent Averell's cavalry division (Bigelow, p. 473). Boatner, Civil War, p. 140, is the source for the defender's strength.

Brandy Station, #198

The attacker's reinforcements, representing two infantry brigades, are from Livermore, Story, III, Book II:348.

Gettysburg, #199

The attacker's and defender's initial strengths are from Livermore, Story, III, Book II:429.

The Wilderness, #202

The initial strengths of the attacker and defender are from Esposito, Atlas to Accompany Steele, map 122b.

Spotsylvania, #203

The opening action of this engagement involved Warren's V Corps and one cavalry division for the attacker and Anderson's I Corps and two cavalry divisions for the defender. The strength of Warren's troops (16,250 men) is from Livermore, Numbers and Losses, p. 112. The attacker's cavalry is estimated at slightly less than one-third of 12,424, the US cavalry corps strength (B&L, IV:153). The strength of Anderson's corps is from B&L, IV:153 (10,000 men). The defender's cavalry is estimated to be one-

half of the total Confederate cavalry strength of 8,000 (ibid., p. 153).

New Market, #204

The attacker's strength is from Boatner, Civil War, p. 588.

Cold Harbor, #205

The defender's casualties are from Boatner, Civil War, p. 163.

Petersburg, #209

Initial strengths of the attacker and defender are from Boatner, Civil War, p. 644.

Globe Tavern, #210

The attacker's initial strength represents that of Warren's V Corps (11,832 men according to Livermore, Numbers and Losses, p. 119).

Bentonville, #215

The defender's initial strength represents that of the XIV and XX corps (17,990 men according to Livermore, Numbers and Losses, p. 134).

Dinwiddie Court House & White Oak Road, #216

The attacker's initial strength is from Boatner, Civil War, p. 282. The defender's initial strength is estimated at approximately one-half of Johnson's division of 6,813 (Livermore, Numbers and Losses, p. 188). These troops moved to meet the Union advance on 29 March. The defender's casualties are estimated. They lost 800 men at White Oak Road according to Freeman, III:665. Freeman also reports that Johnson's division of four brigades lost a total of 1,050 men. Two of Johnson's brigades were at White Oak Road and two at Dinwiddie Court House. Estimated losses at Dinwiddie Court House are 500 for Johnson plus an additional 500 for other units. Therefore the total defender losses are estimated to be 1,800; 800 at White Oak Road and 1,000 at Dinwiddie Court House.

Five Forks, #217

The defender's casualties are from Knox, p. 297.

Sayler's Creek, #219

The defender's strength is estimated to be 21,000 men. Boatner, Civil War, p. 724, reports that the total Confederate casualties in the engagement probably represented one-third of the force that left Amelia and Jetersville. Therefore the total Confederate strength is estimated to be 21,000.

Spichern, #222

The attacker's and defender's initial strengths are from Rousset, I:119.

Mars la Tour, #223

The attacker's initial strength is from Rousset, I:151.

Kumanovo, #248

The attacker's start strength is estimated to be three-fifths of the attacker's total strength. Three Serbian divisions were present for the battle on the first day, and elements of two more plus one entire division arrived on the second day. See Barby, pp. 57-58, 84. The defender's casualties are from Boucabelle, p. 106. Note, however, that the defenders lost many more men in their retreat from the battlefield.

Lule' Burgas, #249

The attacker's initial strength is from Ford, pp. 56-58.

Prelip, #250

The attacker's total strength is estimated to be 50,000 for three divisions. Half of this force (one of two columns) is estimated to be the attacker's initial strength. See Boucabelle, pp. 112-113. The defender's strength is estimated to be 20,000 men (*ibid.*, pp. 112-114). The defender's casualties are from Boucabelle, p. 115.

Monastir, #251

The defender's strength is from Barby, p. 123. Note that this engagement's correct dates and duration should be 16-18 Nov 1912 and 3 days respectively.

The Nieman, #254

The attacker's casualties are estimated. Sikorski, p. 315, reports total Polish casualties for September 1920 as 29,397. Since the Battle of the Nieman was the major conflict during that month, Polish casualties are estimated to be 20,000.

Suomussalmi, #261

The attacker's reinforcements are estimated at 5,000 men (five new battalions) as described in Elting, p. 28. The defender's reinforcements of 18,000 men represent one division (ibid., p. 28).

La Cateau, #267

The attacker's casualties, "estimated on the best returns available," are from Great Britain, Le Cateau, p. 31.

The Heights of Nancy, #269

The correct strength for the defender is 276,000. The original number is a typographical error.

Eastern Champagne, #289

The attacker's and defender's initial strengths and the attacker's casualties are presented in France, Ministere de la guerre, Les armées francaises, II:425, 481. Germany, Der Weltkrieg, VII: 53, gives 46,100 as the total casualties suffered by the defenders from December 1914 to March 1915 in Champagne. French casualties from mid-February to mid-March 1915 were approximately half of the French total for the same time period (December 1914 to March 1915). Therefore, German casualties between mid-February and mid-March 1915 are estimated to be one-half, or 23,050, of 46,100.

Neuve Chapelle, #290

The defender's reinforcements are from Edmonds and Wynne, p. 88.

Ypres II, #291

Total defender strength committed in the Ypres battle is from King, p. 150. This is the strength of the German Fourth Army, but it comports with an estimated German strength for 10 divisions and 5 brigades at an average strength of 13,615 men per division. Edmonds and Wynne, pp. 377-378, give the order of battle of the German forces at Ypres. The average divisional

strength is calculated from the 20 April 1915 strengths of two German divisions which participated in the offensive, presented in Schwarze, p. 266. Total defender strength committed in the Ypres battle is calculated from the British order of battle in Edmonds and Wynne, pp. 370-374.. The British committed 8 infantry divisions (estimated at 18,179 men per division, Becke, p. 126) and 3 cavalry divisions. Two French divisions also participated in the first days of the battle.

Festubert, #292

The defender's strength is estimated for two divisions at the beginning of the battle and the limited number of reserves sent to the front as described in Edmonds, 1915, pp. 49, 80-82. Edmonds, 1915, p. 76, gives German casualties.

First Dardanelles Landing, #300

Strength data originally given for both sides has been changed. The attacker's strength was 32,000 men total ashore on 25 April 1915, 29,000 British and ANZACs, according to Moorehead, p. 159, and 3,000 French, according to King, p. 181. Turkish strength was 5,000 against the ANZACs according to Aspinall-Oglander, I:255. According to Moorehead, p. 149, 2,000 Turks are estimated to have opposed the British landing. Three thousand Turks are estimated to have opposed the French. The ANZACs incurred 2,000 casualties, according to Aspinall-Oglander, I:198, and the British lost 3,000 according to Churchill, The World Crisis, II:333. French casualties are estimated to have been approximately one-half of the 778 casualties they incurred on 25-26 April. Total estimated attacker casualties are 5,400. Moorehead, p. 149, writes that the Turks lost 1,000 against the British. Aspinall-Oglander, I:199, writes that 2,000 Turks were lost against the ANZACs. Approximately one-half of the 1,730 Turkish casualties incurred fighting the French on 25-26 April are estimated to have occurred on 25 April. Total defender casualties are therefore estimated to be 3,900.

Suvla Bay, #301

Turkish casualties are estimated from data presented in Aspinall-Oglander, II:283, 302. One Turkish unit of the force initially opposed to the British landing at Suvla Bay suffered 30% casualties according to Major Willmer, the commander of the force. The Turkish 12th Division incurred 143 casualties on 10 August. Total Turkish casualties are thus estimated by adding one-third of the original Turkish force (600 of 1,800 men) and 150 for the 12th Division on 10 August.

Chemin des Dames, #334

The attacker's start strength is 250,000 men. The defender's start strength is 75,000 men. The defender's casualties are 128,000. All data is estimated.

Exermont-Montrefagne, #374

The correct defender's strength and casualties are 3,245 and 192 respectively, The original numbers were typographical errors.

Megiddo, #385

The attacker's casualties are from MacMunn and Falls, Part II, p. 509. The defender's casualties are estimated to be 7,000 minimum (ibid., p. 488).

Chouigui Pass, #391

Attacker and defender casualties have been estimated to be three men for each destroyed or damaged tank. US forces had no supporting arms, and German forces had only a small group of infantry and engineers in this engagement. No data for German casualties was found in any source. The account of Lieutenant Freeland A. Daubin, Jr., a US tank commander who participated in the action, is quoted in most of the sources consulted for this engagement. Daubin's tank was destroyed and all four crew members were casualties. He notes that a US tank company commander was killed.

Vietri I, #398

The defender's reinforcements are from British 46th Division.

Vietri II, #402

The defender's reinforcements are from ibid..

Mortain, #461

The defender's start strength is 13,690 representing the strength of the US 30th Infantry Division. See HERO, Historical Survey, p. 13. The defender's reinforcements represent the estimated strength of Combat Command B, 3d Armored Division, the 12th Infantry Regiment, and miscellaneous combat units. Shulman, p. 148, writes that the German 2d Panzer Division commander told him in an interview in 1946 that his division was back at its original line of departure by 9 August having incurred 800 casualties. The 2d Panzer Division's total casualties are estimated to

be 1,600 for the entire Mortain battle. The two other German divisions participating are assumed to have sustained a similar number of casualties, giving a total of 4,800 casualties for the Germans. Blumenson, The Duel for France, p. 247, writes that German casualties were higher than those sustained by US forces, but does not give a figure for the Germans.

Westwall, #468

Strengths for both sides were calculated by adding the daily strengths and dividing by six, the duration in days of the engagement. All data is from HERO, Field Fortifications, p. 41. The data is based on operational records and some estimation.

Schmidt, #469

The attacker's reinforcements are from Clark, p. 40. The attacker's strength is calculated by adding the attacker's daily strengths and dividing by twelve, the duration in days of the engagement. See HERO, Historical Survey, p. 36. MacDonald, Siegfried Line, p. 374, estimates the number of German casualties in the main phase of the battle to be 3,000.

Sarre-St. Avold, #475

The correct casualties for the defender are 3,279. The original number is a typographical error.

St. Vith, #484

All data is presented in The Seventh Armored Division, p. 103. US casualties are given only for the 7th Armored Division and attached units (1,037). Casualties for supporting US troops are estimated by using the same proportion of 7th Armored Division casualties to the armored division's strength and multiplying that ratio by the supporting troop's strength.

Bastogne, #485

Two pieces of data for attacker and defender casualties were found in the sources consulted for this battle. Cole, The Ardennes, p. 303, writes that 175 officers and men of Task Force Cherry, one-quarter of its strength, were the casualties incurred by this force on 19 December. One-quarter of the strengths of the other two heavily engaged US forces and the 212 casualties incurred by the 506th Airborne Infantry Regiment on 19 December (ibid., p. 455) were added to give an estimated total of 1,151 US casualties. German casualties at the Noville action were estimated by Task Force Desobry personnel to be the equivalent of a battalion of German infantry, according to Phillips, p.

125. An additional 2,000 casualties at Lullange/Allerborn and Longwilly are estimated to have been incurred, giving a total of 3,000 German casualties. The strength of an airborne infantry regiment was added to the defender's strength, as one unit of this type was engaged in combat.

Soviet Counteroffensive at Moscow, #490

The correct casualties for the defender are 85,300. The original number is a typographical error.

The Pogoreloye Gorodishche Offensive, #491

All data is presented in HERO, Historial Scenarios, p. 73.

Seelow Heights, #515

Strengths for both sides were calculated by adding the daily strengths and dividing by two, the duration in days of the engagement. All data is from HERO, Field Fortifications, p. 47.

Tarawa-Betio, #517

The attacker's initial strength was 5,000 men, part of the 2d Marine Division.

Kerama, #568

The attacker's casualties are from Col. Israel Gefen, an Israeli Defense Forces veteran and HERO consultant. He based this data on an article in Maarachot, No. 292, and on interviews with Israeli participants.

Task 3: Clarification of the Basis for Assigning Victory

The purpose of ²this task is to identify the basis used to determine victory or success in an engagement. As described on pages 12 and 13 of Volume II of the original data base, two criteria were employed to determine victory in an engagement.

1) Decisive (or "Clear-cut") Resolution of Combat is a qualitative assessment of the outcome of combat in favor of one side or the other. (The term "clear-cut," i.e., obvious, is preferable to "decisive" since the latter term has extra-battle-field or strategic connotations). The resolution of combat recorded in Table 7 of the data base is a schematic representation of what happened to both sides as a result of the engagement. It does not necessarily represent whether or not the resolution of combat was decisive, nor was it intended to do so. If the basis for determining victory in an engagement is clear-cut resolution of combat, "RESO" is entered under the column heading CRITERION in the Task 3 tables.

and, 2) Mission Accomplishment, is the criterion used to determine victory, when there was judged to be no clear-cut resolution of combat, but one of the sides is judged to be more successful than the other in accomplishing its mission. Mission accomplishment is shown as a numerical score on a scale of 1 to 10, representing the success each side achieved in fulfillment of its mission. An explanation of the derivation of the mission accomplishment scores is given on pages 14-15 of Volume II of the original data base. If the basis for determining victory in an engagement is mission accomplishment, "ACH" is entered under the column heading CRITERION in the Task 3 tables.

Explanations of the column headings for the Task 3 tables are as follow.

WINA is the heading under which the victor or side which achieved success is designated. The entry "1" indicates that the attacker was victorious or successful, the entry "-1" indicates that the defender was victorious or successful, and the entry "0" indicates that the engagement was a drawn battle. A drawn battle is scored only when (i) there is judged to be no clear-cut resolution of combat and (ii) neither side is judged to have been more or less successful than the other side in accomplishing its mission. The review of the basis for assignment of victory performed for this study disclosed some typographical errors in the original data base and has led to some revisions in analytical assessments affecting success. This has resulted in changes in assigned victory or success for a number of engagements. A review of the 95 engagements recorded for General Problem Report 2 has also resulted in changes in several engagements. All changes in WINA and ACHA and ACHD in Table 5 of the original data base which are presented on the following tables are marked by an asterisk. Users of the data base should regard the entries shown in the Task 3 tables as the correct ones. Where appropriate, changes should be made under "Success" in Table 3 of the first 247 engagements of the data base, as well as under "Victor" and "Success" for all engagements in Tables 5 and 7.

ACHA and ACHD are the mission accomplishment scores of the attacker and defender. The review of the basis for assignment of victory has disclosed some typographical errors in the

original data base and led to some revisions in mission accomplishment scores. Users of the data base should regard the mission accomplishment scores given in the Task 3 tables as the correct ones. Where appropriate, changes should be made in Table 5 of the original data base.

CRITERION is the heading under which the basis for determining victory or success is shown, as described above.
